Capture the brilliance of your product

ALPHASHOT MICRO is an all-in-one solution designed for small items photography, specifically jewellery, gems and watches. It makes it easy fro non-professionals to create consistent images ready for print or online use. It features a patent pending cylindrical lighting system, 360° motorized turnable, a set of accessories and spot light. Eveything to make sure, that the images of different type of jewellery, can be made with consistency , easily and it's specific features can be highlighted.

The key element of ALPHASHOT MICRO is APLHASHOT EDITOR software. It controls directly the lighting with turntable and allows to produce still packshots, 360° images and video. The template based workflow allows to repeat once steup image configuration forever. Software technologies designed specifically for jewellery: Super Focus and Color Beautifier allow to highlight details of the photographed product. Color Beautifier makes it easy to improve brightness of gold, silver, rubies, sapphires and emeralds. Super Focus can make the item razor sharp in its full depth, normally not possible in photography of small items.

### TYPICAL USE:

RINGS

WATCHES

COINS

NECKLASES
