

V-Stitcher is a powerful 3D garment design application that reduces costs and pre-production cycle time.

It allows pattern makers and designers to turn 2D patterns created in PolyPattern into realistically draped garments on true-to-life customizable models. Physically realistic fabric draping, textures, stitching, attachments such as prints and accessories, and garment fitting are all simulated on a virtual human figure.

- Cutting edge, life-like models
- The most advanced fabric draping capabilities
- Visual feedback of garment fit
- Photo-quality display
- 2D and 3D garment design
- Internet-ready 3D models

- Accelerates design and product development
- Enables you to ensure compliance with original design intent early
- Enhances the design process by allowing you to realistically visualize every detail of the design
- Improves efficiency and effectiveness of fit sessions
- Improves product quality
- Improves communication channels
- Reduces time-to-market
- Reduces waste of materials
- Helps generate sales and increase revenues
